

Chairmans Quality Award Submission Grooved Power Screed Tool

Keep Your Anti-Slip Finishes Neat, Clean, and Straight!

Air powered vibrator mounted on custom grooved screeding tool vibrates the screed while floating it along surfaces, bringing paste to the surface and forming neat, clean, straight, and uniform grooves. With the help of the custom touch-up tool, we can be even more certain every piece will look it's best!

Simply connect air hose to the vibrator and place on the form. In this example it's a boat launch ramp, which needs aggressive grooves for tire traction in wet and icy conditions.

Once set on the form, the screeding tool has centering lugs to ensure it is centered and straight, as well as rollers to ensure it maintains straightness while working down the length of the form

Roll the screeding tool down the length of the form for a consistent and high-quality anti-slip finish every time!
