

Chairmans Quality Award Submission QC Multi-Tool

**A Handy Tool for Production and QC Personnel to have
When Completing Pre- and Post-Pour Inspections!**

Pre-Production Materials Check

Production personnel can use this tool to make sure they have the correct rebar, anchors, stands, clips, and much more while preparing for production

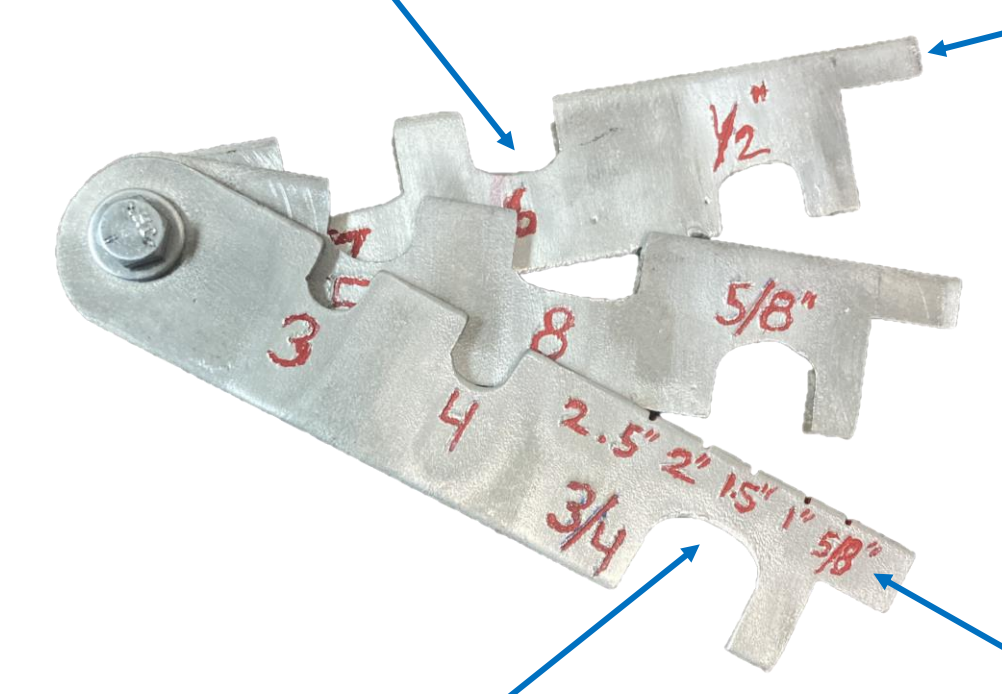

Pre-Pour Verification Checks

Then QC can use this tool to verify correct rebar sizes, wire spacing, concrete cover, anchor sizes, and lifting devices while performing product pre-pour inspections

Cutouts to fit common rebar sizes From #3 - #8 Bar (pre-production). And lifting loop diameters post-production

Tabs sized to insert into common size threaded anchors to verify by internal diameter when anchor is already cast into concrete (post-production)

Cutouts sized to fit over common size threaded anchors to verify by external diameter when bolted to formwork (pre-production)

A 3" ruler to verify wire spacing, concrete cover, spacer size, and a million other quick measurements a QC person needs to take every day!!

Useful, lightweight, and fits in your pocket. This multi-tool is a must have for your production and quality control teams!
