

2022 ACPA Chairman's Safety Award Finalist: Rinker Orlando - Air Compressor Drain

The air compressor on the trolley of the travelling crane needs to drain all the moisture inside the tank. Access to the trolley is requires a manlift.

We installed an automatic drain valve on the air compressor. It automatically cycles every 5 minutes to open for 5 seconds to keep the tank free of moisture.

We also installed a long pipe with a sprinkler bit at the end to spray the mist into the air so it wouldn't splash right on top of the operator.
